

Food hygiene and quality management compliance.

TRENTON BOX MEETS or exceeds internationally recognised standards for food hygiene and quality management systems. This means that as a customer, you can rely on our products complying with rigorous hygiene and product specifications and controls.

Low Migration Peace of Mind

Here at Trenton Box we have invested in robust systems and procedures to support our low migration offering – starting with a virgin press uncontaminated by standard volatile inks, we have ensured all inks and chemicals used in our printing and subsequent processes are entirely low migration compliant, throughout glueing and finishing processes, to ensure that we have a future secured product with regulatory meeting compliance.

Food hygiene

The majority of our business is in the food sector, so we are committed to meeting the highest possible standards in what is probably the most demanding industry sector. To this end we hold accreditation to the direct food contact category

requirements of the British Retail Consortium global standard for packaging and packaging materials.

Our systems include a comprehensive Hazard Analysis and Critical Control Point (HACCP) management process. This constantly monitors our performance, assesses potential hygiene risk areas and identifies critical controls. Under this system, any potential problems can be identified and resolved – before they arise. We operate a controlled production facility, with hygiene procedures that prevent contaminants from entering our plant. All our staff meet strict personal hygiene requirements, including the use of protective clothing in all production areas. Food and drinks are banned from the shop floor and nuts and potential allergens are not permitted on site at all.

In line with this emphasis on hygiene, we ensure that the basic structural integrity of all our packaging products makes them totally fit for purpose, so they will not fail or otherwise compromise the quality of their contents.

Quality management

As an ISO 9001 accredited packaging specialist, we are dedicated to quality at all levels of our operation – from design and manufacture to distribution and delivery. Rigorous quality monitoring runs through the entire manufacturing process, with checks at all stages of production. Strict quality control inspection also extends to prototypes and samples of custom packaging products, and we work faithfully to agreed product specifications.

Full traceability of materials and products is also an integral part of our process.
