

3D Development.

Part of Trenton Box's ethos has been the desire to constantly challenge what we do and how we do it, to improve and be able to offer better service quality and design facilities.

To that end we are introducing 3D development work to assist in developing new pack designs and also helping to ensure that artwork is ok and wraps correctly when made up.

This can be from creating a carton as per the normal cad design but then taking it within the 3D environment where we can manipulate and make up the carton to ensure everything folds correctly and is fit for purpose.

From there we can add artwork, flood colours (inside and out) embossing, debossing, Foiling and window patching. We can add background graphics and even a shop environment.

Something else we are working on are 3D products, allowing us to draw up and create 3D objects such as Tubes / Pots / Bottles etc. therefore being able then to show the pack with product in with artwork.

We have successfully created a range of toiletries bottle & tube packs with artwork

to go into various gift packs for Gifting, these 3D packs had visuals from our cad and were used in presentations with the retailer, all without a physical sample being made and keeping timelines down to a bare minimum as once finished they can be shared via email or FTP.
